Irvine, CA -- May 31, 2008 -- The Serenity DVR/DVS from Teradek represents the cutting edge in video compression. Based on Mobilygen's H.264 High Profile, High definition Codec, Serenity provides unsurpassed video quality and flexibility for any video recording or streaming application.

Capable of compressing, recording, and streaming a full 480 D1 frames per second, Serenity provides 30 fps, D1, DVD quality video on all 16 video inputs, and is capable of displaying up to 6 D1, or 24CIF cameos simultaneously on a single 1080i HDMI output. "This has significantly higher video quality at a considerably lower price point for security professionals, and is an industry first", says DVR veteran Marius van der Watt, president of Teradek, and former VP Engineering of GE Security. "The development kit greatly reduces the risk and cost of developing a modern H.264 DVR. It's a very modular platform, so customers can easily tailor the design for their own needs with minimal impact. Yet it's a great product as it is. This is a truly unique value proposition".

With built in SATA controller and hard drives, Serenity features a variety of flexible storage as well as external archival options, and triplex recording functionality so you can continue recording while reviewing a combination of live and playback.

Serenity also includes dual streaming outputs, an optional DVD Burner hidden behind the handsome front panel, and a built-in Network Router which also makes Serenity a great enterprise video Encoder / Decoder platform. "The network router is another industry first. This allows hybrid recording, and paves the way for a smooth transition to IP based video recording".

Located in Southern California, Teradek is a privately held R&D company focused on developing state-of-the-art, extremely versatile and highly customizable networking video systems, to be used in military, medical, surveillance and traffic control applications. The Teradek team is comprised of the industry's leading engineers in the fields of networking, video compression and distribution, and more.

Serenity is available now. For pricing information, contact Teradek.
